Placing all voting precinct numbers into a random number generator. randomly select 3 polling place precincts and 3 mail ballot precincts.

*attach additional pages if necessary*

Description of any discrepancies noted (include details about each discrepancy and how each was resolved; also include anything unusual observed during the manual tally process or anything that may improve the manual tally process):

We had 3 races with a discrepancy, in each instance a write-in box was filled in with no candidate name written in. These votes were adjudicated as a no vote.

We had a three card ballot this election, in each instance where there are more of card 2 or card 3 returned the votes appear to be greater for contests on those cards. The HART system only gives credit for a ballot cast based on each card one therefore not factoring in when a greater number of card two or card three is cast. On one of our mail ballot precincts we had more card two and three than we had of card one.
